

**In the Claims**

Please amend Claim 1 to read as follows.

1. (Twice amended) A method of inducing a T<sub>H</sub>1 polarized immune response to an antigen, comprising parenterally administering to a subject microparticles sized such that at least 50% of the microparticles are at least 0.6 µm and at least 50% of the microparticles are less than 5 µm, the microparticles comprising said antigen entrapped or encapsulated by a biodegradable polymer.
